

Cisco ASA 5505 Adaptive Security Appliance and ASA 5500-X Series Next-Generation Firewalls

Product Overview

Your small offices or branch locations require the best network security available. An integrated solution that is easy to deploy and manage improves IT efficiency. Affordable pricing and the ability to scale as necessary are other important product benefits. You get all that and more with the Cisco[®] ASA 5505 Adaptive Security Appliance and ASA 5500-X Series Next-Generation Firewalls. These multifaceted security products include the world's most proven stateful inspection firewall with a comprehensive suite of highly integrated next-generation firewall services for networks of all sizes. These firewalls are used and trusted by small and midsize businesses with one or a few locations, large enterprises, service providers, and mission-critical data centers.

Enterprise class security. Cisco MultiScale[®] performance, providing the ability to deliver multiple security services at scale. Unprecedented services flexibility. Modular scalability. Feature extensibility. And lower deployment and operational costs. All of these features and benefits add up to tremendous value in the Cisco ASA 5505 Adaptive Security Appliance and ASA 5500-X Series Next-Generation Firewalls. Available in a wide range of sizes and performance levels to fit your network, budget, and evolving security needs, all models deliver the same proven level of security that protects the networks of some of the largest and most security-conscious companies in the world. They also provide the visibility and control you need to take advantage of new applications and devices without compromising security.

Cisco ASA 5512-X and 5515-X Adaptive Security Appliances

The Cisco ASA 5512-X and 5515-X Adaptive Security Appliances combine the most widely deployed stateful inspection firewall in the industry with a comprehensive suite of next-generation network security services for comprehensive security without compromise. They provide multiple security services and redundant power supplies and help enable consistent security enforcement throughout the organization. In addition to comprehensive stateful inspection firewall capabilities, the Cisco ASA 5512-X and 5515-X Adaptive Security Appliances optionally provide broad and deep network security through an array of integrated cloud- and software-based security services, including Cisco Application Visibility and Control (AVC), web security, Cisco Cloud Web Security (CWS), and the only context-aware intrusion prevention system (IPS) - all with no need for additional hardware modules.

The Cisco ASA 5512-X and ASA 5515-X Adaptive Security Appliances are part of the Cisco ASA 5500-X Series Next-Generation Firewalls, which is built on the same proven security platform as the rest of the Cisco ASA Family of firewalls and delivers exceptional application visibility and control along with superior performance and operational efficiency. The Cisco ASA 5512-X and 5515-X Adaptive Security Appliances are designed to meet evolving security needs by providing, among other things, innovative next-generation firewall services that make it possible to take advantage of new applications and devices without compromising security.

Unlike other next-generation firewalls, the Cisco ASA 5500-X Series Next-Generation Firewalls keep pace with rapidly evolving needs by offering end-to-end network intelligence gained from combining the visibility from local traffic with in-depth global network intelligence using:

- [Cisco TrustSec® technology](#)
- [Cisco AnyConnect® Secure Mobility Solution for unique mobile client insight](#)
- [Cisco Security Intelligence Operations \(SIO\) for near-real-time threat information and proactive protection](#)
- [Cisco ASA Next-Generation Firewall Services](#)

With up to 1.2 Gbps of firewall throughput, 250,000 concurrent firewall connections, 15,000 connections per second, and 6 integrated Gigabit Ethernet interfaces, the Cisco ASA 5512-X and ASA 5515-X Adaptive Security Appliances are excellent choices for businesses requiring a high-performance, cost-effective, and extensible security solution with exceptional application visibility and control that can grow as your needs change.

Cisco ASA 5505 Adaptive Security Appliance

The Cisco ASA 5505 is a full-featured firewall for small business, branch, and enterprise teleworker environments. It delivers high-performance firewall, SSL and IPsec VPN, and rich networking services in a modular, immediately operational appliance. Using the integrated graphical Cisco Adaptive Security Device Manager (ASDM), the Cisco ASA 5505 can be rapidly deployed and easily managed, helping businesses reduce operational costs. It features a flexible 8-port 10/100 Fast Ethernet switch whose ports can be dynamically grouped to create up to three separate VLANs for home, business, and Internet traffic for improved network segmentation and security. The Cisco ASA 5505 provides two Power over Ethernet (PoE) ports, simplifying the deployment of Cisco IP phones with highly secure zero-touch voice over IP (VoIP) capabilities, as well as the deployment of external wireless access points for extended network mobility. A high-performance intrusion prevention and worm mitigation service is available with the addition of the Advanced Inspection and Prevention Security Services Card (AIP SSC). Multiple USB ports can be used to implement additional services and capabilities as they are needed.

As business needs grow, customers can install a Security Plus upgrade license. The Cisco ASA 5505 can then scale to support a higher connection capacity and up to 25 IPsec VPN users, add full DMZ support, and integrate into switched network environments through VLAN trunking support. Furthermore, this upgrade license improves business continuity by helping to enable support for redundant ISP connections and stateless active/standby high-availability services.

Businesses can also extend the Cisco ASA 5505's VPN service by enabling Cisco AnyConnect client and clientless VPN remote access to support various mobile workers and business partners. Cisco Secure Remote Access Solution deployments can scale to serve up to 25 AnyConnect or clientless VPN concurrent users on each Cisco ASA 5505 by installing an Essential or a Premium Cisco AnyConnect VPN license.

This combination of market-leading security and VPN services, advanced networking features, flexible remote management capabilities, and future extensibility makes the Cisco ASA 5505 an excellent choice for businesses requiring a best-in-class small business, branch, or enterprise teleworker security solution.

Table 1 compares the features and capacities of the Cisco ASA 5500 and ASA 5500-X platforms for small offices and branch locations.

¹ Maximum throughput measured with UDP traffic under ideal conditions.

² Multiprotocol = Traffic profile consisting primarily of TCP-based protocols/applications like HTTP, SMTP, FTP, IMAPv4, BitTorrent, and DNS.

³ Firewall traffic that does not go through the IPS service can have higher throughput.

⁴ Throughput was measured using Cisco ASA CX Software Release 9.1.1 with multiprotocol traffic profile with both AVC and WSE. Traffic logging was enabled as well.

⁵ VPN throughput and sessions count depend on the ASA device configuration and VPN traffic patterns. These elements should be taken into consideration as part of your capacity planning.

⁶ Separately licensed feature; includes two SSL licenses with base system.

Cisco ASA 5500 Series IPS Security Services Processors, Modules, and Cards

The Cisco ASA 5500 Series brings a new level of integrated security performance to networks with its highly effective IPS services and multiprocessor hardware architecture. This architecture allows businesses to adapt and extend the high-performance security services profile of the Cisco ASA 5500 platform. Customers can add additional high-performance services using security services modules with dedicated security co-processors, and can custom-tailor flow-specific policies using a highly flexible policy framework. This adaptable architecture helps businesses deploy new security services when and where they are needed, such as adding the broad range of intrusion prevention and advanced antiworm services delivered by the IPS modules through the Advanced Inspection and Protection (AIP) Security Services Module (SSM) and AIP Security Services Card (SSC), or the comprehensive malware protection and content security services enabled by the Content Security and Control (CSC) SSM. Further, the Cisco ASA 5500 Series architecture allows Cisco to introduce services to address new threats, giving businesses outstanding investment protection.

The Cisco ASA 5500 Series IPS Security Services Processor (SSP), AIP SSM, and AIP SSC services are inline, network-based solutions that accurately identify, classify, and stop malicious traffic before it affects business continuity for IPv4, IPv6, and hybrid IPv6 and IPv4 networks. They combine inline prevention services with innovative technologies, resulting in total confidence in the provided protection of the deployed IPS solution, without the fear of legitimate traffic being dropped. The AIP SSM and AIP SSC also offer comprehensive network protection through their unique ability to collaborate with other network security resources, providing a proactive approach to protecting the network.

Accurate inline prevention technologies provide unparalleled confidence to take preventive action on a broader range of threats without the risk of dropping legitimate traffic. These unique technologies offer intelligent, automated, contextual analysis of data and help ensure that businesses are getting the most out of their intrusion prevention solutions. Furthermore, the IPS SSP, AIP SSM, and AIP SSC use multivector threat identification to protect the network from policy violations, vulnerability exploitations, and anomalous activity through detailed inspection of traffic in Layers 2 through 7.

Table 2 details the AIP SSM and AIP SSC models that are available and their respective performance and physical characteristics.

Cisco ASA 5500 Series Content Security and Control Module

The Cisco ASA 5500 Series CSC SSM delivers industry-leading threat protection and content control at the Internet edge, providing comprehensive antivirus, antispam, file blocking, antiphishing, URL blocking and filtering, and content filtering services in an easy-to-manage solution. The CSC SSM bolsters the Cisco ASA 5500 Series strong security capabilities, providing customers with additional protection of and control over the content of their business communications. The module provides additional flexibility and choice over the functioning and deployment of Cisco ASA 5500 Series. Licensing options help organizations customize the features and capabilities to each group's needs, with features that include advanced content services and increased user capacity. The CSC SSM ships with a default feature set that provides antivirus, antispam, and file blocking services.

A Plus license is available for each CSC SSM at an additional charge, delivering capabilities such as antispam, antiphishing, URL blocking and filtering, and content control services. Businesses can extend the user capacity of the CSC SSM by purchasing and installing additional user licenses. A detailed listing of these options is shown in Table 3 and in the CSC SSM data sheet.

Cisco ASA 5500-X Series Next-Generation Firewall 6-Port Gigabit Ethernet Interface Cards

Cisco ASA 5500-X Series 6-port Gigabit Ethernet interface cards extend the I/O profile of the Cisco ASA 5512-X and ASA 5515-X Adaptive Security Appliances by providing additional GE ports. The cards provide the following benefits:

- Better segmentation of network traffic (into separate security zones)
- Fiber-optic cable connectivity for long distance communication
- Load sharing of traffic as well as protection against link failure by using EtherChannel
- Support for jumbo Ethernet frames of up to 9000 bytes
- Protection against cable failure for the most demanding active/active and full-mesh firewall deployments

Table 4 lists the characteristics of the Cisco ASA 5500-X Series Next-Generation Firewall 6-port Gigabit Ethernet interface cards.

Service and Support

Cisco Services help you protect your network investment, optimize network operations, and prepare your network for new applications to extend network intelligence and the power of your business.

Included in the “Operate” phase of the service lifecycle are the Cisco Security IntelliShield® Alert Manager Service, Cisco SMARTnet® Service, Cisco Service Provider Base, and Cisco Services for IPS. These services are suitable for enterprise, commercial, and service provider customers.

The Cisco Security IntelliShield Alert Manager Service provides a customizable, web-based threat and vulnerability alert service that allows organizations to easily access timely, accurate, and credible information about potential vulnerabilities in their environment.

Cisco Services for IPS supports modules, platforms, and bundles of platforms and modules that feature IPS capabilities. Cisco SMARTnet and Service Provider Base support other products in this family.
